

Flavored Gherkin Sample

Index

- This is a feature with table in step
 - I have table in one of my step
 - I am some testing scenario of some functionality
 - I am some other testing scenario of some functionality
 - I am some testing scenario of other functionality
- I am some feature for testing some functionality
 - I am some testing scenario of some functionality
 - I am some other testing scenario of some functionality
 - I am some testing scenario with two tags of some functionality
 - I am some testing scenario of other functionality
- I am some other feature for testing some functionality
 - I am some testing scenario of other functionality
 - I am some testing scenario outline of other functionality
 - I am some testing scenario of some functionality
 - I am some other testing scenario of some functionality
- I am some other feature for testing some broken functionality
 - I am some failed testing scenario of some functionality
 - I am some undefined testing scenario of some functionality
 - I am some pending testing scenario of some functionality
 - I am some testing scenario of some functionality
 - I am some other testing scenario of some functionality
- I am some other feature for testing tag functionality
 - I am some testing scenario with two tags of some functionality
 - I am some testing scenario with one tags of some functionality
 - I am some testing scenario of some functionality
 - I am some other testing scenario with watir screenshot
 - I am scenario with more steps

@feature_tag

Feature This is a feature with table in step

This is some description of feature

- 1) do this
- 2) do that

Background

Given I am give step of some feature

@feature

Scenario I have table in one of my step

When I am step with options:

| option1 | value1 |

| option2 | value2 |

Then I am then step of some feature

@high

Scenario I am some testing scenario of some functionality

When I am when step of some feature

Then I am then step of some feature

@low

Scenario I am some other testing scenario of some functionality

And I am give step of some other feature

When I am when step of some other feature

Then I am then step of some other feature

Scenario I am some testing scenario of other functionality

When I am when step of some feature

And I am when step which will fail

Then I am then step of some feature

Feature I am some feature for testing some functionality

@high

Scenario I am some testing scenario of some functionality

Given I am give step of some feature

When I am when step of some feature

Then I am then step of some feature

@low

Scenario I am some other testing scenario of some functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some other feature

@high @last

Scenario I am some testing scenario with two tags of some functionality

Given I am give step of some feature

When I am when step of some other feature

Then I am then step of some this feature

@feature

Scenario I am some testing scenario of other functionality

Given I am give step of some feature

When I am when step of some feature

Then I am then step of some feature

@feature_tag

Feature I am some other feature for testing some functionality

@feature

Scenario I am some testing scenario of other functionality

Given I am give step of some feature

When I am when step of some feature

Then I am then step of some feature

@feature

Scenario Outline I am some testing scenario outline of other functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some **option** feature

Examples

| **option** |

| other |

| this |

@high

Scenario I am some testing scenario of some functionality

Given I am give step of some feature

When I am when step which will fail

Then I am then step of some feature

@low

Scenario I am some other testing scenario of some functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some other feature

Feature I am some other feature for testing some broken functionality

@scenario @screenshot

Scenario I am some failed testing scenario of some functionality

Given I am give step of some feature

When I am when step which will fail

Then I am then step of some feature

@wip

Scenario I am some undefined testing scenario of some functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some undefined feature

@scenario

Scenario I am some pending testing scenario of some functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some pending feature

@high

Scenario I am some testing scenario of some functionality

Given I am give step of some feature

When I am when step of some feature

Then I am then step of some feature

@low

Scenario I am some other testing scenario of some functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some other feature

Feature I am some other feature for testing tag functionality

@high @last

Scenario I am some testing scenario with two tags of some functionality

Given I am give step of some feature

When I am when step of some other feature

Then I am then step of some this feature

@feature

Scenario I am some testing scenario with one tags of some functionality

Given I am give step of some other feature

When I am when step of some other feature

Then I am then step of some other feature

@high @scenario @feature @more

Scenario I am some testing scenario of some functionality

Given I am give step of some feature

When I am when step of some feature

Then I am then step of some feature

@low

Scenario I am some other testing scenario with watir screenshot

Given I am give step of some other feature

When I am when step of some other feature

And I am step with watir screenshot

Then I am then step of some other feature

@high @more @long

Scenario I am scenario with more steps

Given I am give step of some feature

And I am give step of some other feature

When I am when step of some feature

And I am when step of some other feature

Then I am then step of some feature

Then I am then step of some other feature
